

To start this assignment we provide you with a SQLite script which contains instructions as inline comments. You should use the same database file you worked on in the previous practice assignments.

First, open the provided database in DBeaver and use our starter SQLite script. Write your queries based on the inline instructions and run them to get your results. After you get the result you can check your work instantly in Codio.

In order to check your work you will need to complete the fill in the blank questions in the "Guide" tab on Codio. These questions are meant to be spot checks, and will give you an example query once you have gotten the correct answer. You have unlimited attempts on all questions in the quizzes.

For this graded assignment, we will be giving you an additional empty database file called "practice\_homework\_empty.db". You'll continue to use your old database file, but for this practice assignment, you'll be working with two databases at the same time. To do this, you'll attach the old database in DBeaver, which will be the first part of your inline instructions in the SQLite script for this assignment.

The SQLite script and new empty database have been provided in your Codio environment under the //submit/src folder.

## Submitting this Assignment:

This assignment should be submitted using these steps:

1. Click **Launch App** at the bottom of the page to open the assignment in Codio.
2. Go to the "Guide" tab in the assignment. Complete the quiz questions, which will tell you when you get the correct answer. These are meant to be spot checks to give you instant feedback on your queries.

**NOTE:** *You may have issues submitting to Codio with Safari - we recommend you use **Chrome** for your browser to avoid issues.*
